“I know what I want to say, I just can’t say it!”

That’s a harsh reality for those stroke survivors who have aphasia: A reality they must face everyday.

“Aphasia is an impairment of the ability to use language usually acquired as a result of a stroke or other brain injury.”

(go to aphasia.org for more information)

We are looking for individuals WITHOUT a history of brain injuries between the ages 40 and 85 to take part in our many research projects.

Who we are

The Laboratory for Research on Aphasia and Stroke is directed by Dr. Tracy Love, Associate Professor in Speech, Language and Hearing Sciences at SDSU and a Research Scientist in the Dept. of Psychology at UCSD.

We have two testing locations for your convenience

University of California, San Diego in La Jolla
Alvarado Medical Center (Near San Diego State University)

Those who participate

• Your involvement is critical in our ultimate goal of gaining a more detailed understanding of how the brain processes language. By doing so, we have a better chance at developing better treatments to assist in the rehabilitation of stroke survivors.
• Join us for approx. 5 testing sessions, each lasting about 60 minutes, in a comfortable, friendly environment
• Will be compensated $15 for time and travel each visit.

If you have questions, or are interested in participating,
Please contact us at either UCSD (858) 534-7356 or SDSU (619) 594-7880
